Es BODYGUARD

**Looking for a quality
Group 8 variety to drive
production?**

**Need to feed quality maize
to high yielding cows?**

YOU NEED BODYGUARD:

-  **Improved cell wall digestibility speeds forage digestion in gut**
-  **Excellent combined digestibility from cobs, stem and leaf**
-  **Good lodging resistance**

Grainseed Ltd

Es BODYGUARD

PROTECT YOUR STARCH WITH BODYGUARD

Cob Ripeness

Well filled determinate cob with large grains. High cob ripeness and early starch lay down.
Cob ripening days after Picker + 5

Maturity Group

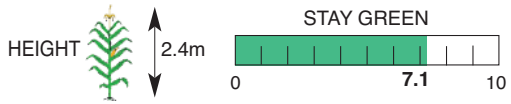

Long harvest window from variety that has early cob ripeness from natural maturity. Plant remains greener at harvest aiding digestibility and extending the potential harvest window.

Quality & Digestibility

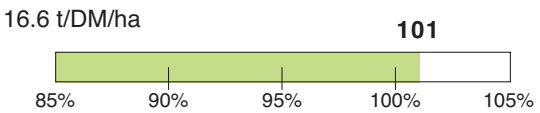

Good cell wall digestibility 56.8% ensures quick digestion within rumen allowing more feed to be consumed and more milk or meat to be produced.

Plant Description

Good plant with prostrate leaves, lot of leaf bulk. Good cob held low on plant.
Long harvest window.

Yield

Sow at 42,500 seeds/acre 105,000 seeds/ha to maximise cob and starch content. Quality silage produced from a leafy plant with cob that has early grain dry down.
Robust and stable performance.
