

DUALTO

Want big yields in the clamp?

Looking for exceptional digestibility?

Need a variety that performs well in drought conditions?

YOU NEED DUALTO:

-  **High yields across all sites**
-  **Also suitable for Biogas production**
-  **Produce high yields of good quality silage**
-  **Exceptionally high CWD %**

Grainseed Ltd

DUALTO

BIG YIELDS - VERY GOOD QUALITY

Cob Ripeness

Large cob with high number of grain sites, 15% more than average. Good grain maturity for longer season variety.

Cob ripening days after Picker + 16

Maturity Group

Good cob ripeness for its maturity group.

Very consistent performance across sites and years.

Quality & Digestibility

A slightly greener plant means a highly digestible, good quality silage is clamped. Exceptionally high cell wall digestibility 58.1%, improving intake.

Plant Description

Tall green plant with prostrate leaves and very large cob.

Plant stays slightly greener up until harvest allowing the plant to photosynthesise through to harvest increasing plant digestibility.

Yield

Sow at 45,000 seeds/acre (111,000 seeds/ha) for maximum yields.

Very consistent performance every year. Good drought tolerance on sand and gravel soils ensuring grain and starch production.
