

Es PICKER

Are you in a marginal area?

**Fed up with producing
immature maize?**

Drilling late?

Need to drill wheat in September?

YOU NEED PICKER:

-  **Stable high yielding group 10**
-  **Better cob ripeness than
Kaspian and Ambition**
-  **Best combination of yield
and earliness**
-  **Suitable for difficult sites or late
sowing**
-  **Best early vigour for fast
establishment**

Grainseed Ltd

Es PICKER

Cob Ripeness

Very early maturing grain on a thin spindle. Distinctive long indeterminate cob. Better cob maturity in marginal areas than Kaspian or Ambition.

Maturity Group

Es Picker the ultra early with the best combination of grain maturity and plant dry down.

Quality & Digestibility

ME

11.4

STARCH

35.1%

Above average ME on a more digestible plant = 188,000 Mj/ha.
5.78t/ha above average starch yields in maturity group 10.

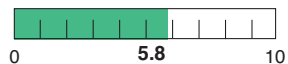

Plant Description

HEIGHT

2.4m

STAY GREEN

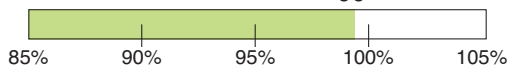

Good vigour (7.8) in the spring. Tall erect plant.
Improved quality in a very early variety due to even plant dry down and good cob maturity.

Yield

16.5 t/DM/ha

99

Sow at 42,500 seeds per acre 105,000 seeds per hectare
High yielding group 10 variety. Good combination of yield and maturity. Very reliable performance in field.
