

NEW

CATHY

Have you got good maize growing land?

Want a new high yielding stable variety?

Want to maximise your maize yields?

YOU NEED CATHY:

-  **New very high yielding NIAB variety**
-  **Stable yields over 4 years of NIAB testing**
-  **Good performance from emergence to harvest**

Grainseed Ltd

CATHY

MAXIMISE YOUR MAIZE YIELDS

Cob Ripeness

Large well filled determinate cobs with large number of grain sites for maximum starch production. Cob held low on the plant. Early starch lay down. Cob ripening days after Picker + 18

Maturity Group

Good maturity for favourable maize sites. Early grain maturity with extended harvesting window from green plants. Very even growth throughout the season from spring vigour to harvest maturity.

Quality & Digestibility

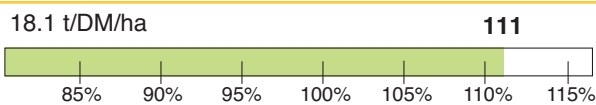

Good levels of ME and starch from mature grains on a longer season variety. Excellent Cell Wall Digestibility 57.4% which allows more maize to be fed.

Plant Description

Tall plant with low even cob position. Medium green in colour with good vigour in the spring. Green plant at harvest allowing the full growing season to be utilised.

Yield

One of the highest yielding varieties tested by NIAB, consistently performing well on good maize sites over the 4 years of testing. Potential for superb Dry Matter yields at 30% dry matter. Fill your clamp.
