

**NEW**

# DUTOP

**Are you wanting high yields on good maize fields?**

**Do you need drought tolerance?**

**Want to utilise the full growing season?**

## **YOU NEED DUTOP:**

-  **High yielding group 6 variety**
-  **Very good cell wall digestibility**
-  **Excellent robust performance on farm**
-  **Long harvest window**

**Grainseed Ltd**

# DUTOP

## MAXIMISE YOUR MAIZE YIELDS

### Cob Ripeness

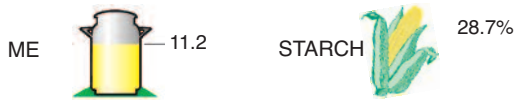

Dutop has large well formed cobs held low on the plant with 14 grains per ring and typically 36 rings of grain. Cob ripening days after Picker + 17

### Maturity Group

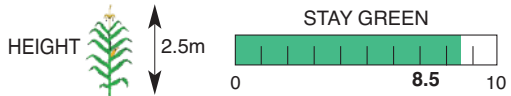

An excellent performing variety on farm in the main maturity group for Favourable sites allowing the full growing season to be utilised and high yields to be clamped.

### Quality & Digestibility

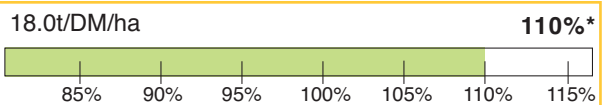

Good cell wall digestibility and digestibility ensure more forage is eaten and more milk and meat produced.

### Plant Description

Good seedling vigour. Robust green plant with prostrate leaves capturing sunlight and reducing weeds in the field. Good grain maturity and stay green prolongs harvest window.

### Yield

\* average yield in FERA trials  
Sow at 42 500 seeds per acre 105 000 seeds per hectare  
High yield and good tolerance to drought ensures excellent performance in the field
