

MAXI-MAIZE PLACEMENT FERTILISER

“THE BEST STARTER FERTILISER FOR YOUR MAIZE”

The difference is clear in the field

Maxi-Maize is the ideal placement fertiliser.

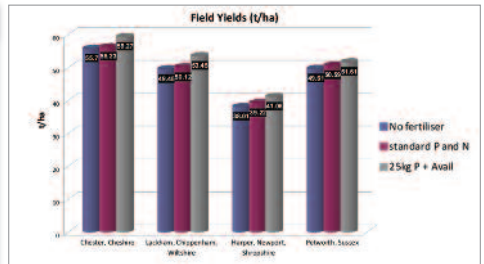

Up to 10% Increase in yield.

Apply one 25kg bag down the spout of the drill.

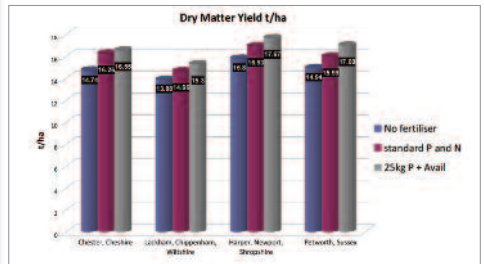

Maxi Maize 25kg/acre

MAP 50kg/acre

Does it work in the field?

- Extra yield of +1.3t/acre above no placement fertiliser
- + 0.93t/acre above standard DAP at 50kg/acre

Maxi Maize 25kg/acre

MAP 50kg/acre

Field experience shows benefit to growers throughout the season with more vigorous plants, earlier tasselling, more grain sites and earlier grain maturity.

Improved grain maturity and more grain per cob is gained from Maxi Maize placement fertiliser.

Grainseed Ltd

MAXI-MAIZE PLACEMENT FERTILISER

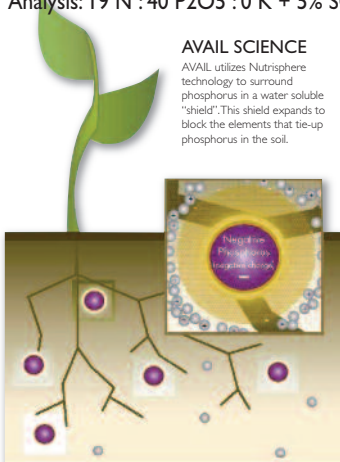

“THE BEST STARTER FERTILISER FOR YOUR MAIZE”

Applied at 1/2 rate of standard DAP (62kg/ha = 25kg/acre)

Analysis: 19 N : 40 P₂O₅ : 0 K + 5% SO₃ + 0.5MgO + 0.9CaO + WolfTrax Manganese, Zinc and Boron + Avail

AVAIL SCIENCE

AVAIL utilizes Nutrisphere technology to surround phosphorus in a water soluble "shield". This shield expands to block the elements that tie-up phosphorus in the soil.

Avail Polymer

A coating is applied to DAP which attracts cations in the soil reducing losses of phosphate to the soil.

The Avail treated DAP is mixed with Wolftrax DDP Zinc and CAN (Calcium Ammonium Nitrate) to increase the N Content.

- Ammonium N from CAN is better for root development whilst Nitrate N produces greener leaves quicker
- Calcium helps overcome stress and increases cell thickness
- Magnesium is used to make chlorophyll and thus improves photosynthesis

- Wolftrax DDP Zinc is a powder which coats all fertilizer granules providing up to 50 times the number of interception points for the roots compared to granular Zinc. Zinc is required for protein synthesis and early plant development.

Maxi-Maize benefit in the field

- Extra yield of +1.3t/acre above no placement fertilizer
- + 0.93t/acre above standard DAP at 50kg/acre

Maize placement fertilizer should be applied with the maize drill 5cm (2") to the side and 5cm (2") below the seed. The drill operator needs to adjust the fertilizer gearbox to apply maxi-maize at 25kg per acre.

Supplied in 25kg (1 acre) packs and delivered with seed.

Also supplied in 600kg (24 acre) dumpy bags.

Applied at 1/2 rate of standard DAP (62kg/ha = 25kg/acre)
