## ULTRA EARLY VARIETY WITH GOOD HARVEST WINDOW

### Cob Ripeness

Large cob with small spindle. Good early starch lay down.  
Cob ripening days after Picker + 3

### Maturity Group

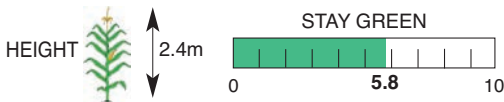

Rapid maturing cobs offering the potential for early harvest.  
For an ultra early variety the plant stays green for longer at harvest.

### Quality & Digestibility

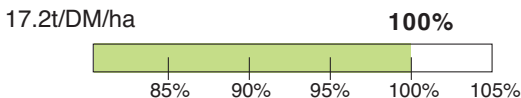

Excellent combination of high starch content and good ME value conjoining to give you a high value feed stock.

### Plant Description

Medium to tall plant with semi-erect green leaves with excellent lodging resistance. Terrific early vigour ensuring your crop establishes well when sown.

### Yield

Sow at 42,500 to 45,000 seeds per acre (105,000 to 111,000 seeds/ha) to maximise output.  
Potential for outstanding yields from an Ultra Early variety.  
Excellent cob to bulk ratio combining to fill your clamp with a top quality feed.
