

# DUALTO

**Need a variety that performs well in drought conditions?**

**Want big yields in the clamp?**

**Looking for exceptional digestibility?**

**YOU NEED DUALTO:**

-  **High yields across all sites**
-  **Also suitable for Biogas production**
-  **Produce high yields of good quality silage**
-  **Exceptionally high CWD %**

**Grainseed Ltd**

# DUALTO

## BIG YIELDS - VERY GOOD QUALITY

### Cob Ripeness

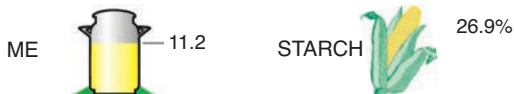

Large cob with high number of grain sites, 15% more than average. Good grain maturity for longer season variety. Cob ripening days after Picker + 16

### Maturity Group

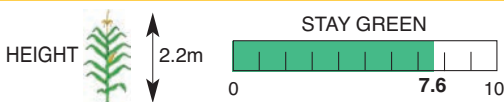

Excellent cob ripeness for its maturity class with long harvest window. Very consistent performance across sites and years.

### Quality & Digestibility

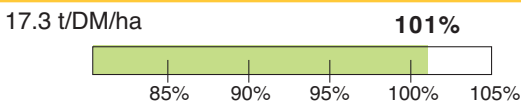

A slightly greener plant means a highly digestible, good quality silage is clamped. Very high cell wall digestibility 57.7%, improving intake.

### Plant Description

Tall green plant with prostrate leaves and very large cob. Plant stays slightly greener up until harvest allowing the plant to photosynthesise through to harvest increasing plant digestibility.

### Yield

Sow at 42,500 to 45,000 seeds per acre (105,000 to 111,000 seeds/ha) to maximise output. Very consistent performance over years. Good drought tolerance on sand and gravel soils ensuring grain and starch production on those more challenging sites.
